

Waterborne Finishes

Healthy - Wise - Durable - Beautiful

Bona's Swedish waterborne finishes are the most durable polyurethane hardwood floor finishes of any kind. They are also non-yellowing and will not change color over time, highlighting the true beauty and elegance of the wood.

No need to vacate your home

Bona finishes are environmentally safe with low VOC's. With no harmful fumes, you don't have to move out of the house during refinishing. As the finish dries, water—not harmful solvents—evaporates into the air, leaving the protective, urethane coating on the wood. All Bona waterborne finishes are GREENGUARD certified for indoor air quality.

Back on your floor in no time

Your floor can be walked on with stocking feet in 3 to 4 hours, and furniture can be placed back on the floor (not dragged) in 72 hours. Area rugs can be put down in one week when the finish is fully cured.

Keeping Them Beautiful

Proper maintenance and floor care is the final step to ensure long-lasting beauty of your wood floors.

Bona's microfiber cloth actually absorbs and attracts dirt, microparticles, and common household allergens.

Bona® Professional Series Hardwood Floor Cleaner is a waterborne, non-toxic cleaner designed for hardwood floors. Unlike all-purpose cleaners and oil soaps, it cleans without dulling your floor's beautiful finish or leaving any residue.

There is a clear difference.

Insist on Bona for Hardwood Floor Finishing.

Bona®

Refinish your hardwood floors
without the dust...
and without harmful fumes

Bona®

Why the concern for indoor air quality?

Indoor air quality has quickly become a top priority for environmental groups, consumers, and manufacturers. The Environmental Protection Agency considers indoor air quality one of the top five environmental threats to human health.* Immediate effects of poor indoor air quality include irritation of the eyes, nose and throat, headaches, dizziness, allergies, and fatigue. Indoor air pollutants may also trigger symptoms of some diseases, including asthma, reproductive and developmental problems, and cancer.

The traditional sand and finish process, which uses solvent-based finishing products and lacks dust containment, creates an environment of hazardous airborne wood dust and harmful fumes in a home or business.

The Bona Atomic DCS® Difference

Hardwood floors add beauty and value to your home, and refinishing is the best way to enhance and preserve that beauty.

Traditional hardwood floor sanding is typically an extremely dusty process—a dust-storm in your home, lingering dust in your air-ducts, and a clean-up headache that feels like it will never end.

But there is a cleaner, healthier, and faster process with Atomic Dust Containment Systems from Bona.

Eliminate Dust

The innovative concept of the Bona Atomic DCS® is to have powerful vacuum motors connected to all of the sanding equipment, virtually eliminating the airborne dust generated from the sanding process.

The Atomic Dust Containment Systems are the most advanced and powerful dust containment systems available, reducing dust far beyond what the traditional sanding process generates.

NOW

With Bona's dust containment system, there's no airborne dust generated to permeate a home or business. It's a healthier environment to work in everyday and cleans up what used to be an extremely dusty process.

The Bona Atomic DCS® and Bona waterborne finishes are GREENGUARD certified for indoor air quality. The Bona system is the only GREENGUARD certified system in the industry.
